AI DETECTION & INCIDENT ALERTING

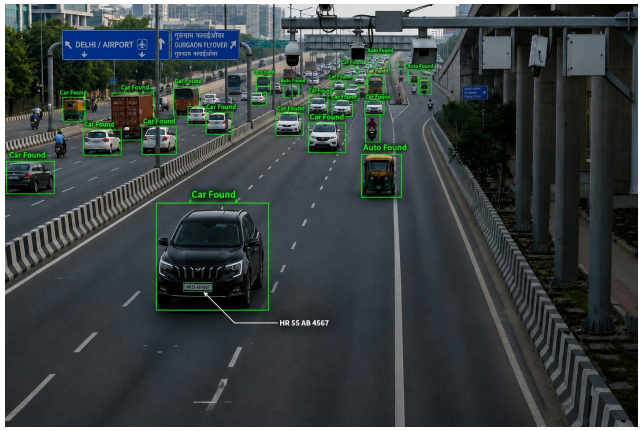

Detection, alerting, incident logging and plain-language investigation

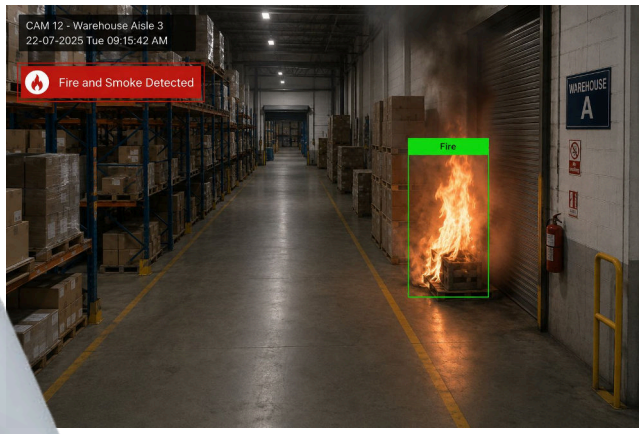

NAINA acts as an autonomous analyst on the cameras you already own. It watches every feed continuously, raises an alert the moment a rule is broken, and writes a time-stamped narrative of each incident across perimeters, entrances, corridors, plant floors and transport routes, with no camera replacement and no parallel network.

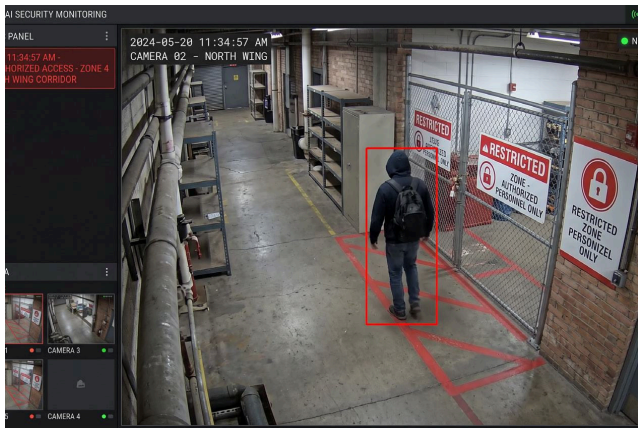

Five Areas of Capability

1. **AI-Based Detection**
   Spots people, vehicles, objects and unusual movement in every live feed, without hand-written rules per camera.
2. **Automated Incident Logging**
   Writes a secure, time-stamped record of each event with snapshots, so evidence never depends on memory.
3. **Custom Alerts & Escalation**
   Raises only the alerts you define, on the zones and hours you define, routed to the people who must act.
4. **Historical Analysis in Plain Language**
   Ask NAINA a question in everyday words and get answers from months of recorded footage in seconds.
5. **Infrastructure Integration & Scale**
   Runs on the cameras, NVRs and networks already in place, and grows from a single site to many.

2

AI-AUGMENTED SURVEILLANCE PLATFORM

NAINA continuously monitors every connected feed, detects anomalies and generates secure logs while enabling natural-language search of past events. Detection models for people, vehicles, fire and smoke, restricted zones and crowd behaviour run side by side on the same infrastructure.

HOW IT WORKS

Ingest the existing feeds, apply detection models per camera and zone, log every event with snapshots, raise alerts on your rules, then query the whole history in plain language.

Detection Modules

1. **Human Detection & Tracking**
   Tracks people across live feeds for improved security and monitoring, with counts and movement paths per zone.

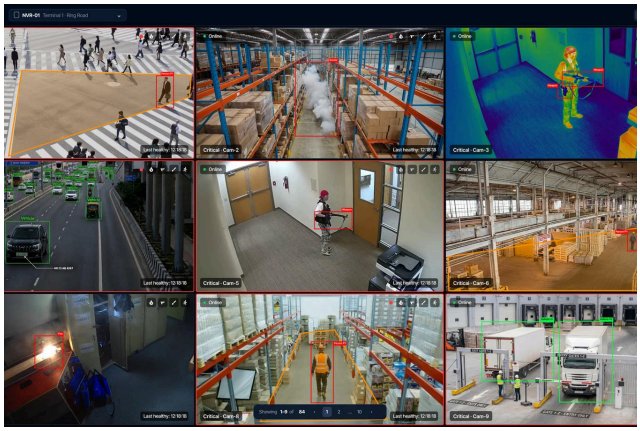

2. **ANPR & Traffic Control**
   Tracks vehicle movement and recognises number plates to strengthen security, traffic management and operational efficiency.

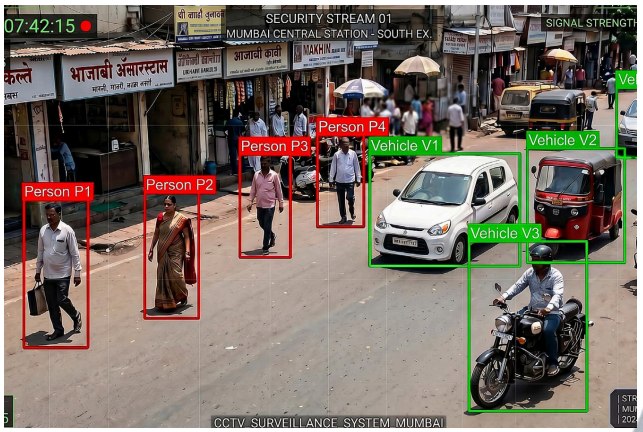

3. **Fire & Smoke Detection**
   Detects early signs of smoke and fire in real time from live video, triggering instant alerts for rapid response.

4. **Restricted Area Monitoring**
   Identifies restricted-zone violations and triggers immediate alerts so security can act while it still matters.

5. **Crowd Density & Congestion**
   Measures crowd levels and detects unsafe overcrowding, warning you before bottlenecks or stampedes occur.

6. **Natural-Language Incident Search**
   Ask a question in plain words and NAINA returns matching events, snapshots and timelines without manual review.

3

DEPLOYMENT, DASHBOARD & SUPPORT

NAINA integrates with the camera networks and imagery feeds already in place, so deployment is rapid and does not require replacing current infrastructure. Operations run from a single dashboard alerts, incidents, camera health and reports backed by role-based access and full audit logging.

DEPLOYED ACROSS

Airports & Transport Hubs · Industrial Plants & Warehousing · Critical Infrastructure · Corporate & Institutional Campuses · City & Traffic Networks

DEPLOYMENT OPTIONS

On-Premise · Cloud · Hybrid · Single-Site to Multi-Site Networks · Integration with Existing IP Cameras, DVR & NVR Systems

Core Capabilities

1. **NAINA AI Assistant**
   Chat with NAINA to retrieve incidents, reports and camera activity in plain, everyday language, with no query syntax to learn.

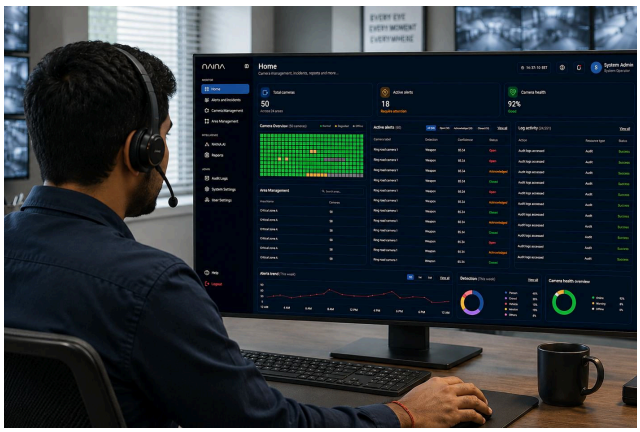

2. **Incident Dashboard & Analytics**
   Live view of total cameras, active alerts, detection mix and alert trends across every connected site, on a single screen.

3. **Camera Health & Coverage**
   Continuous health checks across the estate, flagging offline, degraded or blind cameras before they cost you evidence.

4. **Audit Logs & Role-Based Access**
   Every action recorded and every user scoped, so operators, investigators and administrators each see only what they should.

5. **Reports & Evidence Export**
   Scheduled and on-demand reports with snapsh and timelines, exportable for investigation and compliance review.

6. **Managed Rollout & 24×7 Support**
   Deployment planning, tuning per camera and zc and continuous monitoring so the platform kee performing well.
